DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed January 14, 2005 in which Claims 6 and 34 have been amended and new Claims 39-51 have been added, has been placed of record in the file.
2. The indicated allowability of claim 6 is withdrawn in view of the rejections cited below:

Drawings

3. The drawings are objected to because the specific structure of the mechanism, which allows rotation in two orthogonal planes, is not clearly shown. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. No new matter should be entered. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 2833

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1-51 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant's claims are deemed unclear because the specific structure of the mechanism, which allows rotation in two orthogonal planes, is not clearly described in the Specification nor shown in the Drawings. Appropriate correction is required. No new matter should be entered.

Allowable Subject Matter

6. Claims 1-51 would be allowable if the Specification, the Drawings and the claims are rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112 set forth in this Office action.

The references fail to teach, disclose, or suggest, either alone or in combination, the connection mechanism or means being adapted to limit the motion of the second connector head or functional unit in a first plane substantially coincident with the axis and in a second plane substantially orthogonal to the axis, the first surface substantially

flush with the external surface, the connector adapted to rotate in a plane parallel to the external surface and in combination with the rest of the limitations of the base claims.

Response to Arguments

7. Applicant's arguments with respect to claims 1-51 have been considered but are moot in view of the new ground(s) of rejection.
